iMpact / ORION · verified product brief

What ORION is.

ORION is iMpact’s flagship product: an assistant that works from the context you permit, shows the plan before it acts, and keeps a record you can read, export, or delete. This page is the detailed version — definition, principles, architecture, current limits, live product, documents, and policies in one place.

DEFINITION

ORION turns a plain-language request into an inspectable plan, names the tools and permissions each step needs, and executes only what you confirm. Today it runs as a free public workspace that can act inside the iMpact website and generate real plans with a hosted model. Desktop-wide context and tool execution are still in development, and this page marks them as such rather than implying they ship.

FUNDAMENTALS

The commitments that shape ORION

01 / Permitted context

Assistance begins with the task and context a person explicitly permits — never a silent sweep of files, screens, or accounts.

02 / Visible plan

Before anything happens, ORION restates the request and lists steps, tools, and permissions so a person can inspect or stop it.

03 / Controlled action

Every action is confirmable, interruptible, and recorded in plain language. Model choice is a routing decision, not a loyalty.

ARCHITECTURE

Four layers, each with an honest stage

01 / Request and interpretation · LIVE

A plain-language request is matched to a concrete intent: open a page, change appearance, switch language, search, copy a link, or explain the product.

02 / Planning and reasoning · LIVE

A hosted model restates the task and produces steps with the tool and permission each one needs. The plan is returned, never auto-run.

03 / Confirmed action and record · LIVE

Page-changing actions wait for confirmation, then run inside this website. The result is written to a local record you can export or clear.

04 / Computer context and tool execution · DEVELOPMENT

Reading the active window or selection and running permitted desktop tools. This is engineering in progress; a web page cannot do it.

BOUNDARIES

What works now — and what does not

WORKING TODAY

— Open any page of this website after you confirm it

— Switch between light and dark appearance

— Switch the whole site between English and Arabic, with right-to-left layout

— Open site search and copy the current page link

— Turn a described task into a real plan with steps, tools, and permissions

— Keep, export, and delete a local record of what you asked and what happened

NOT AVAILABLE

— See your screen, other browser tabs, or any other application

— Open, read, or change your files

— Sign in to accounts, send email, or make payments

— Act outside this website, or act without your confirmation

— Remember anything on a server — the record lives only in this browser

COMPANY STATUS

— iMpact is the parent company. ORION is the flagship product, in development.

— The public ORION workspace is free. No subscription, checkout, or payment is active.

— Registered legal identity details are pending verification and are not published until confirmed.

— No traction, revenue, customer, funding, valuation, partnership, or award claims are made anywhere on this site.
